Summary

2nd year mechanical engineering student at University of Sheffield with a strong interest in mechanical design and optimisation. A recipient of the Trish Murray Award for Professionalism, I possess proven skills in CAD modeling, simulation, and CNC manufacturing developed through multidisciplinary group projects. Seeking industry experience to apply my technical knowledge to real-world engineering challenges and contribute to innovative design solutions

Education

University of Sheffield | Sheffield | 09/2024 - current
MEng: Mechanical Engineering with an Industrial Placement Year

Currently achieving a 1st (77% average)

Relevant Modules: Dynamics of Structures and Machines (73%), Mechanics of Deformable Solids (62%), Design Project Part 1 (78%), Mathematics for Engineering Modelling (84%), Accounting and Law for Engineers (86%)

Barnsley Sixth form College | Barnsley | 09/2022 - 06/2024

A-Levels: Mathematics (A)

A-Levels: Physics (A)

A-Levels: Geography (B)

Key Skills

- **Design and Simulation:** Developed a wide range of CAD models using Fusion360 and conducted FEA/CFD analysis (Ansys Fluent) to optimise a bottle rocket and e-bike gearbox
- **Manufacturing and Workshop:** Proficient in using hand tools, lathes, laser cutters and CNC milling. I have used these to manufacture functional components for a bottle rocket and gearboxes
- **Project Management and Professionalism:** Won the Trish Murray award for professional teamwork. Used Gantt charts to coordinate 5 person teams to ensure project deadlines were met
- **Computational Skills:** Proficient in software such as Excel. Utilised MATLAB for calculating rocket trajectories and gear forces
- **Communication Skills:** Delivered findings and project reviews through presentations. Collaborated in multidisciplinary teams to design LFP battery/hydrogen hybrid aircraft

Engineering Experience

- **Reaching Aid (Oct 2024 - Dec 2024):** Designed a reaching aid for people with limited grip strength and wrist mobility
- **Global Engineering Challenge (Jan 2025):** Presented findings to industry leaders on safe transportation for Johannesburg
- **Water Bottle Rocket (Feb 2025 - May 2025):** Designed, manufactured and tested a water bottle rocket which was designed to carry medical supplies to areas in need. Achieved an academic grade of 72%
- **Engineering You're Hired (Jan 2026):** Designed an electric aircraft to tackle the growing pollution in the aviation industry. Won the best design in our hub and achieved an academic outcome of 87%
- **Gearbox Project (Oct 2025 - Current):** Designed, manufactured and tested a gearbox for an e-bike which was compliant with EAPC regulations

Hobbies and Interests

- Student member of IMECHE
- Member of F1 Society
- Strong personal interest in vehicle dynamics and Formula 1 engineering, particularly in how performance, materials, and aerodynamics influence design.
- Keen to apply mechanical and design principles from coursework and projects (e.g., e-bike gearbox) to automotive contexts.
- Enjoy following developments in sustainable mobility and emerging electric vehicle technologies.
